

We're dedicated to providing a product of the highest quality, along with comprehensive engineering services, exemplary customer service standards and on-time product delivery. Since 1929, we have applied stainless steel spinning, stamping, deep drawing, rolling and welding to develop products that not only meet your aesthetic requirements, but provide years of durable service. We build our receptacles to the highest tolerances for a precise fit and long product life.

After all the time spent selecting every detail for your public space, why risk ruining your project's appeal by selecting ordinary waste receptacles? A Cleanline waste receptacle or planter is a high-performance choice that lends a clean, sophisticated look to any interior or exterior project. Choose Cleanline, and put a new spin on public décor.

Standard Waste Receptacles

Cleanline waste receptacles are closer to art than trash. We offer top and side loading waste receptacles that can be configured for specialized locations. But our design features and customizable options make Cleanline the perfect solution for every application.

- Lid formed from 18 GA (.048”) type 304 stainless steel
- Base formed from 14 GA (.078”) type 304 stainless steel
- Recessed base for easy maintenance and to hide mop splashes
- Bag stabilizer slots to hide bags from sight
- Can be customized with standard lid, ashtray top or tray top
- Use in arenas, convention centers, shopping malls, airports and outdoor applications
